Listen for announcements from local officials to find out what to do. They will tell you if there are germs and/or chemicals in the water.

Boil water if instructed. Boil it for at least 1 minute (start counting when the water comes to a constant boil). Let the water cool sufficiently before drinking. Boiling kills germs in the water.

Use bottled water if instructed. Sometimes after a disaster, there may be chemicals in the water that boiling cannot remove.

Breast-feed or use ready-made formula.

If you must use water to make formula, use only commercially-bottled water until officials say your tap water is safe to drink.

Never drink the water unless you know it is safe.

Never wash or clean dishes, utensils, toys, or other objects in the water unless you know it is safe.

Never bathe in the water unless you know it is safe.

Never cook with the water unless you know it is safe.

Never brush your teeth with the water unless you know it is safe.

Never use the water to make ice unless you know it is safe.
